Mountain Weather Forecast

Ground Conditions Supplement

Date: Monday 27 February 2023 Location: Helvellyn summit at 12:05 Full report: There was a thin layer of fresh snow on the very highest Lake District summits this morning which had settled down to approximately 750m. However this was rapidly thawing throughout the day as the freezing level rose above the summits. The few old snow patches from January have refrozen and were hard and icy. These can be found on steep N through E aspects above 900m and walkers are very unlikely to come across them. The new snow was only a couple of centimetres deep combined with a lot of rime ice and was spread fairly evenly across the summits in the light winds. Full winter clothing (warm and waterproof) including hats and gloves, a map, compass, and headtorch are all essential for anyone venturing onto the fells. Crampons and an ice axe are generally not required but carrying microspikes is strongly recommended. Temperature: minus 1.2 C, Maximum wind speed 24.6 mph, Wind chill: minus 10.2 C, Average wind speed: 22.3 mph
